

Module 1: The Virtual Command Center

Navigating athenaOne and Orchestrating Remote Care at Prima Medicine

You Are the Digital Heartbeat of Prima Medicine

Card 1

The Reality of the Screen

We know that managing a flooded clinical inbox from a remote desk can feel isolating and chaotic. Screen fatigue is real.

Card 2

The Shift in Perspective

You are not buried in tasks; you are orchestrating care from above. Your workspace is a Virtual Command Center.

Card 3

The Mission

Technology is your tool to empower, not overwhelm. By mastering these digital panels, you become the central intelligence hub routing critical care across Northern Virginia.

Securing Your Digital Perimeter

The MFA Shield

All Privia systems require Multi-Factor Authentication (MFA). It is the iron-clad perimeter of your Command Center.

Spoofing Defense

Scammers fake caller IDs (hospitals, pharmacies).

Key Defense: Always use a separate, known communication channel to verify unexpected or sensitive requests.

The Air-Gap Rule

Strictly separate your digital lives.

Confidential Information, PHI, and PII must never touch personal cloud services (iCloud, Google Drive, OneDrive). Mixing accounts leads to inadvertent data leaks.

Critical Protocol: The Verification Checkpoint

1. The **Federal Mandate** (45 CFR § 164.514): You **MUST verify** the identity of a patient and their authority to access Protected Health Information (**PHI**) before proceeding.
2. The **Golden Rule**: The identity of a patient **MUST be verified** prior to accessing or assigning a chart to your department.
3. The **System Risk**: Because of the online patient portal and automated billing mailers, improperly assigned or overwritten charts in athenaOne trigger **immediate, reportable breaches** of PHI.

Verify ID Before Opening Chart

The Prima Medicine Operational Landscape

Practice led by Dr. Chethana Rao (Founder/Medical Director) alongside a large roster of MDs, DOs, NPs, and PAs.

Triage Parameters: Standard vs. Concierge Care

Standard Primary Care	Concierge Medicine
Clinical Model Traditional acute/chronic care, medical weight loss, Medicare enrollment.	Clinical Model Proactive, preventative, whole-person care led by Dr. Mandana Shafai.
Inbox Routing Priority Standard SLA queue processing.	Inbox Routing Priority Immediate, VIP routing for same-day access.
Visit Length Standard appointment slots.	Visit Length Extended, unhurried appointment blocks.
Communication Routine portal messaging via myPrivia App.	Communication Direct-access communication, highly personalized follow-up.

Initializing athenaOne: Your Home Base

Top Navigation (The Horizon):

Quick search, patient lookup, and global alerts.

The Clinical Inbox (The Radar):

Where myPrivia app messages, lab results (curbside testing), and refill requests land. Your primary battleground.

The Menu Bar (The Toolkit):

Access to Patients Tab, Reports, and Care Programs Panel.

The Patient Chart (The Target):

Comprehensive view of history, active care programs, and documentation.

Note: Always verify patient ID before clicking into the Patient Chart.

Workflow Alpha: Conquering the Clinical Inbox

Workflow Beta: Pre-Encounter Prep

The Goal: Minimize distractions during the patient encounter by completing tasks ahead of time. Allow the provider to focus on the patient, not the screen.

Workflow Gamma: Virtual Visit Coordination

Context Note: Prima Medicine relies on virtual visits for follow-ups and remote patient monitoring. Master this flow to troubleshoot and prevent provider delays.

1. The Trigger

Patient receives a confirmation email/text. Remind patients the link activates on the day of the appointment.

2. Pre-Registration

Patient clicks Begin Pre-Registration to handle forms and co-pays digitally.

3. The Device Check

Encourage patients to click Start device check prior to the visit to ensure technical readiness.

Workflow Delta: Chronic Care Management (CCM)

Workflow Epsilon: Non-Provider Sign-Offs

Execution & Rules

- **The Rule of Delegation:** You may only handle purely administrative or technical tasks related to documentation.
- **Execution:** Only apply your digital signature to designated administrative sections of the intake/discharge workflow, never to the core clinical assessment.

Strict Compliance Mandate

- **The Timing Requirement:** Sign-off can ONLY occur AFTER the physician has personally performed and documented the substantive portion of the encounter.
- **The Paper Trail Mandate:** There must be documented approval from the licensed provider for delegation to you. This documentation must be maintained for a minimum of six years.

Remote Pro-Tip: The Mobile Voice Accelerator

PRO-TIP

The Setup:

As a remote worker, dual-monitor setups are standard, but adding the athenaOne Mobile App acts as a powerful third screen.

The Accelerator:

Use the built-in Voice Assistant to accelerate meaningful clinical tasks and bypass manual typing.

Command Examples:

- Say: "Hey athena, what is my schedule today?"
- Say: "Hey athena, start my HPI."
- Say: "Hey athena, order amoxicillin twice a day."

The Benefit:

Reduces total task completion time and retrieves key patient information instantly while your hands are busy triaging the main desktop inbox.

Synthesis: The Digital Nervous System

An Iron-Clad Perimeter

Rigid adherence to MFA and identity verification ensures patient trust and system integrity.

Contextual Triage

Knowing the Prima map—when to route to Fairfax vs. Immediate Care, and concierge vs. standard—makes you highly effective.

UI Mastery

Executing bold clicks in the Care Programs Panel or the pre-encounter prep screens turns complex tech into seamless patient care.

The Result: Empowered Care Orchestration

You are no longer just clicking buttons; you are the operational nervous system connecting the patient to the provider.

Command Center Initialized: Readiness Check

- [] MFA enabled and work/personal environments separated.
- [] Identity verification protocols memorized.
- [] Standard vs. Concierge triage parameters understood.
- [] Inbox, Pre-Encounter, and CCM workflows reviewed.

*You have secured the perimeter and mastered your dashboards.
Next, we dive deeper into specific clinical documentation standards.*
