

Mastering the athenaOne Digital Workflow

Module 2: Virtual Chart Prep & Telehealth
for Remote VA RNs at Prima Medicine

The Invisible Engine of Patient Care

As a remote VA RN, you are the central nervous system of Prima Medicine. You manage an invisible digital assembly line:

Processing high volumes of **myPrivia** portal messages.

Prepping charts so providers **never miss a beat**.

Juggling the isolation of **remote** work with relentless **digital alerts**.

We know screen fatigue is real. This module is built to streamline your clicks, reduce context switching, and protect your time.

Navigating the Prima Medicine Landscape

Standard Primary Care & Urgent Care

Profile: High volume, fast-paced acute and chronic care.

Locations: Fairfax hub (includes Saturday hours), South Riding, Merrifield, Tysons.

Upcoming Shift: Heavy triage routing to the new Prima Immediate Care hub.

VA Strategy: Rely on standard templates and automated routing.

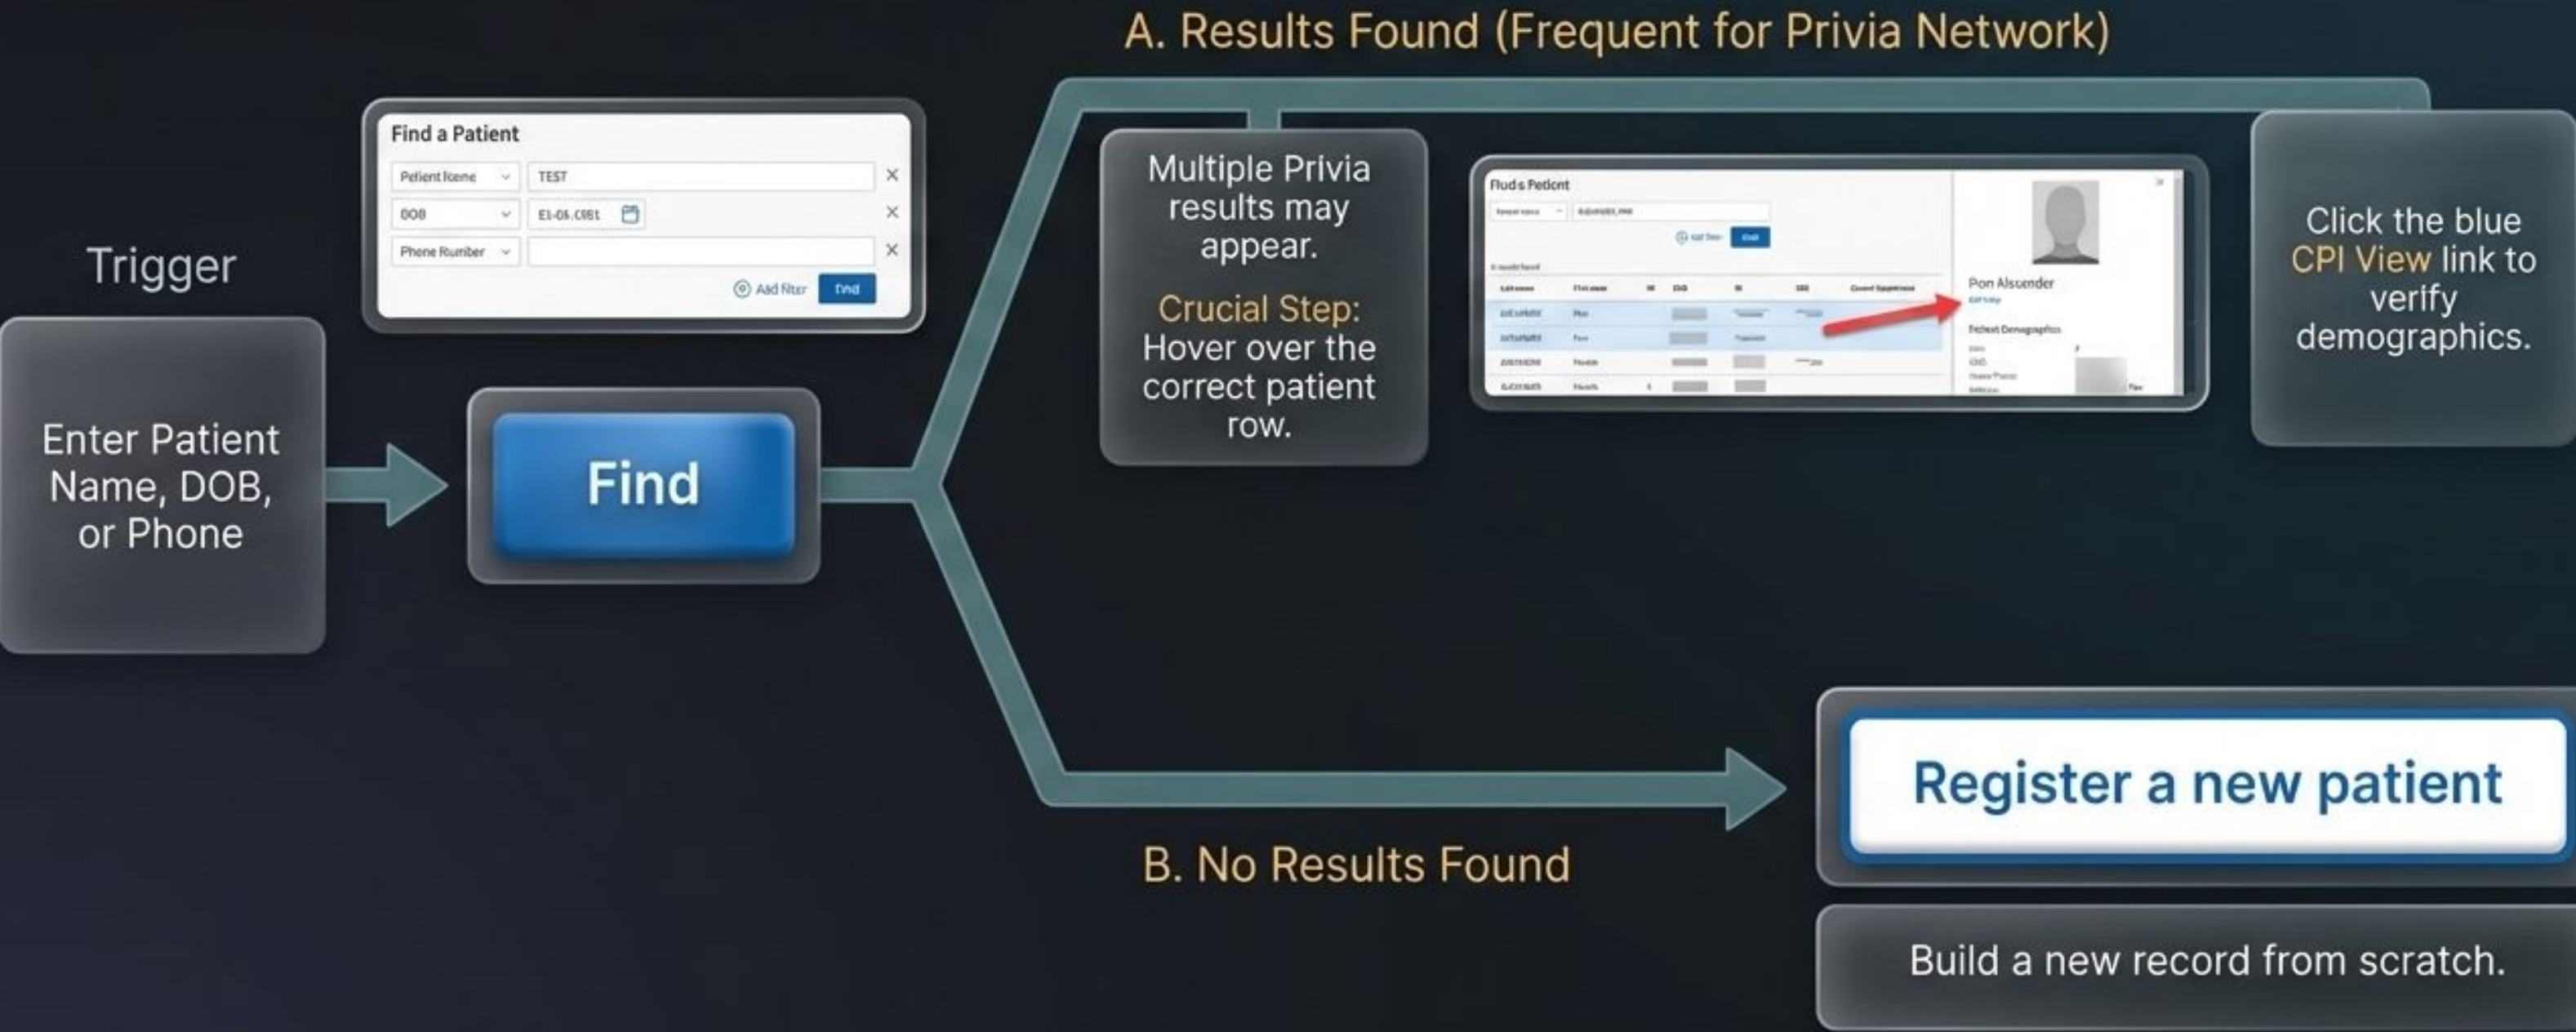

Prima Concierge Care

Profile: Led by Dr. Mandana Shafai. High-touch, personalized, proactive care.

Expectations: Direct communication lines, same-day access, extended appointment times.

VA Strategy: Requires immediate priority flagging and highly personalized chart prep.

Step 1: The Search and Verify Workflow

Architecting the Pre-Encounter Chart

Your goal before the video connects:

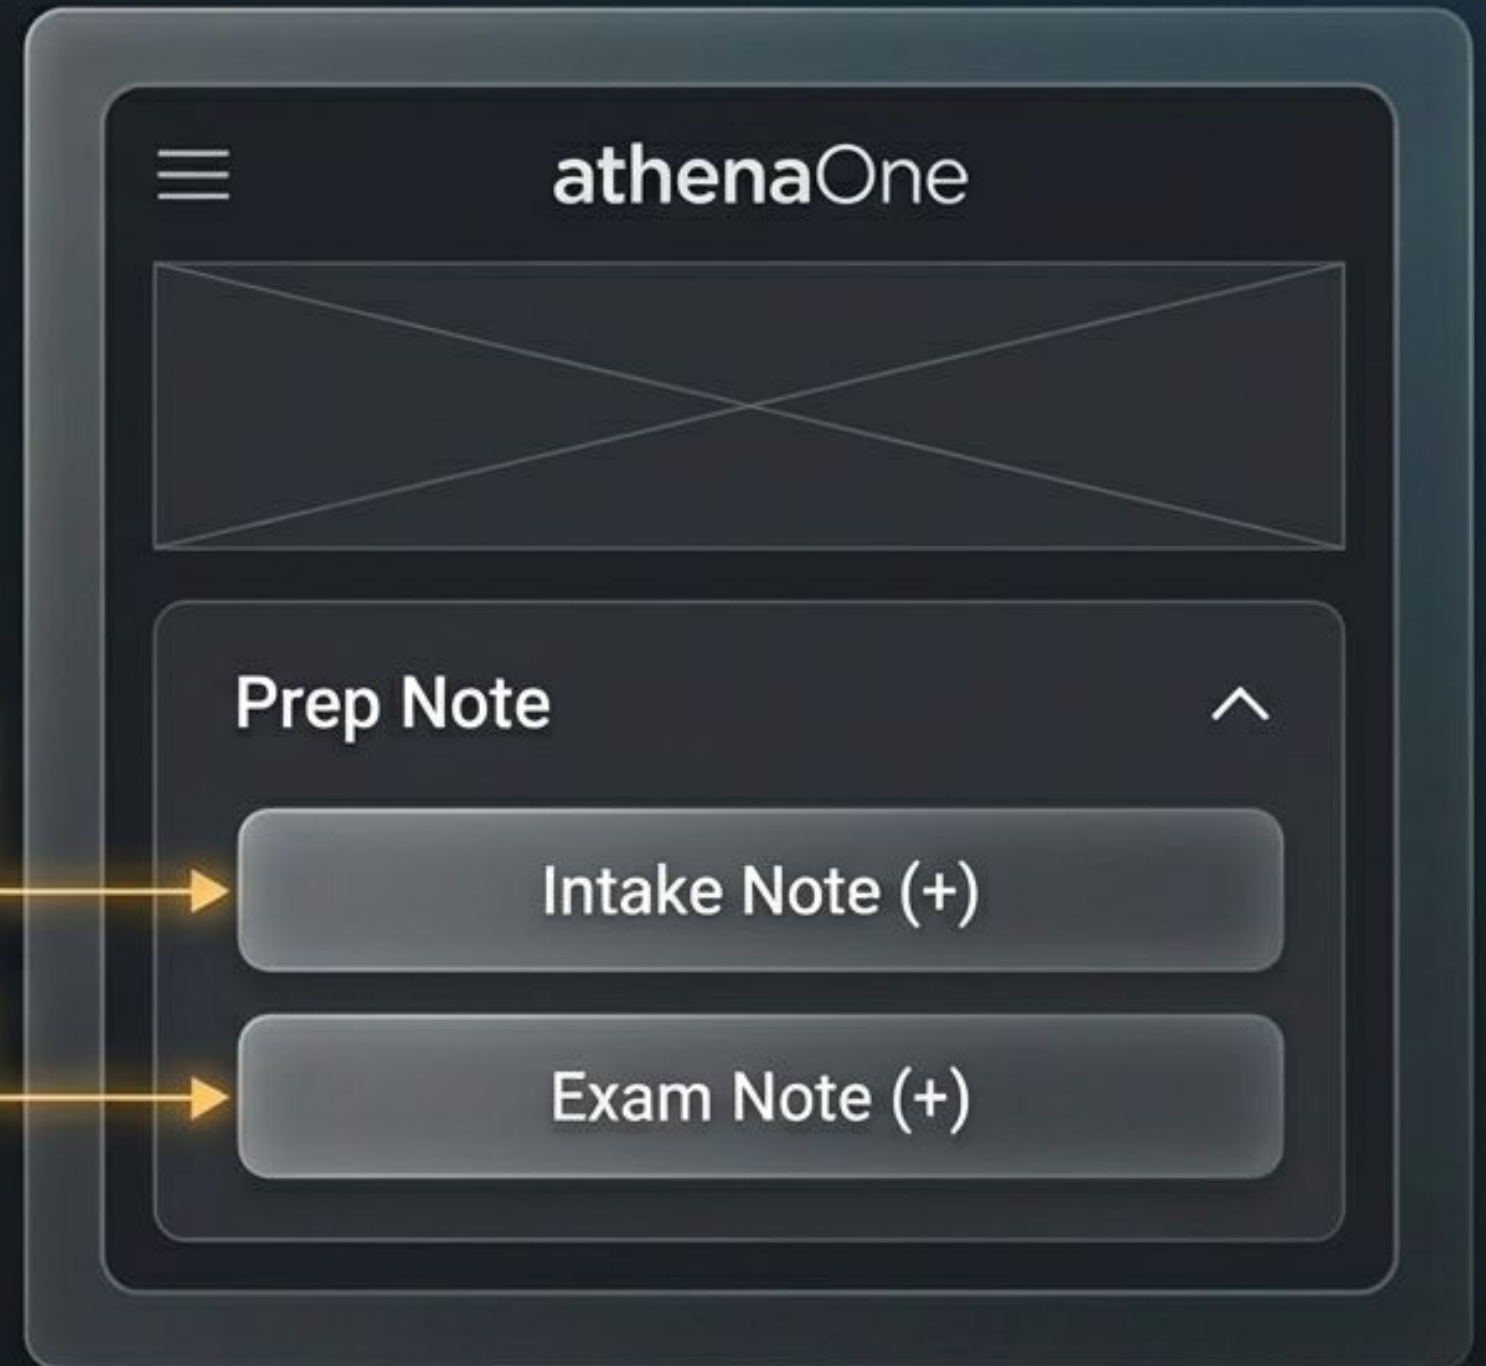

Create a minimalist, one-page view for the provider.

Minimize in-visit distractions by loading the heavy data beforehand.

Intake Notes: Prep relevant vitals, screeners, and preliminary data.

Exam Notes: Load anticipated templates or planning orders based on the visit reason.

Result: The provider opens the chart and sees exactly what they need, nothing they don't.

Workflow Accelerators: Stop Typing, Start Clicking

Manual Workflow

Patient reports worsening cough for three days, productive of yellow sputum. Febrile to 101.5F. Heart rate 98, respiratory rate 18. No known allergies. Prior history of COPD. Medications include Albuterol HFA, Lisinopril 10mg. Vital signs recorded at 0900. Blood pressure 135/85. O2 saturation 95% on room air. Exam shows scattered rhonchi and wheezes. Plan includes ordering CBC, BMP, Chest X-ray. Reviewing previous labs from 2023-10-15 shows in house.

It is common to start continuing: patient reports on for production of sputum, and in a trending of the findings and patient containing pramir: amrel: normal over the sources. Patient reports singh of cough for three days, respiratory sputum moditetr: is det: errate an e: warnings and the tr: vus. Some that a concuated visit: indatal casos, micronalaus, and blotors. Patient reports worsening cough for three days, productive of yellow sputum. Febrile, heart rate: imate 98, respiration rate, respiratory rate, respiratory rate on room air. Exam shows scattered rhonchi and wheezes. Plan includes ordering CBC, BMP, Chest X-ray. Reviewing previous labs from 2023-10-15 shows in house.

Minutes of repetitive typing for vitals, standard warnings, and routine diagnoses.

Accelerated Workflow

Deploy Macro

Saved Findings Templates

Build and deploy these for routine, repetitive visit types (e.g., standard med checks).

Encounter Plan Macros

The ultimate accelerator. With one click, instantly populate standard diagnoses, assessment text, and specific patient handouts.

Empathy Check: The Patient's Digital Journey

Patients must complete this flow before they reach you. When a patient is stressed, knowing exactly what screen they are looking at changes everything.

1. The Prompt

Patient clicks the appointment link via Email, Text, or the myPrivia portal.

2. The Tech Check

Patient arrives at the landing page and initiates the hardware test.

3. The Waiting Room

Patient enters their name, agrees to Telehealth Terms of Use, and clicks Next to be admitted.

Telehealth Troubleshooting 101

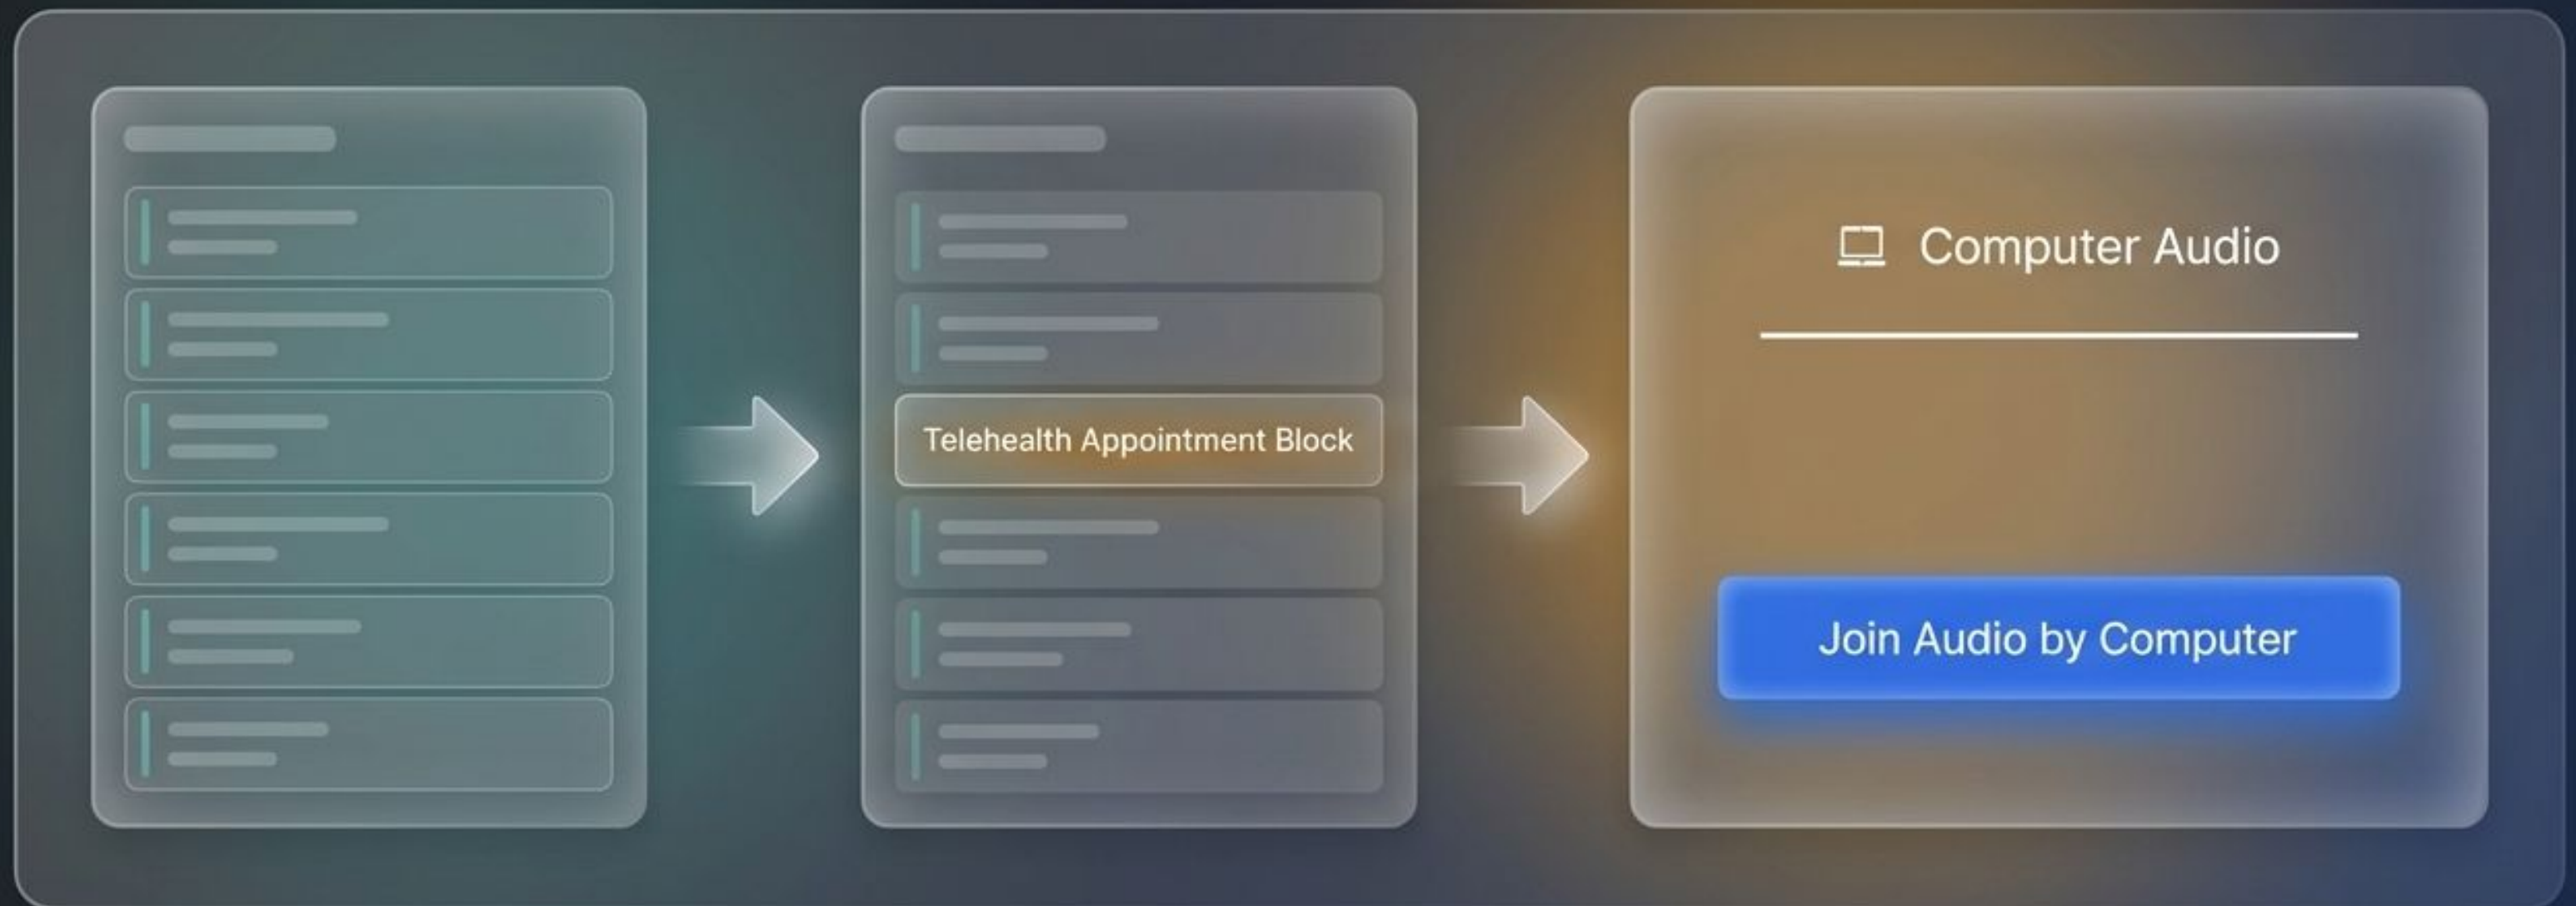

“My camera isn’t working!” - A 3-Step Diagnostic Guide

1. **Browser Check:** Ensure the patient is not using Incognito or Private Browsing mode.
2. **Permission Unlock:** Instruct them to click the **Lock icon** located near the right side of their browser’s URL search bar. Open the dropdown menu and change **camera/microphone** access to **Allow**.
3. **The Hard Reset:** Have them **refresh** the browser tab by pressing **Cmd/Ctrl + R**.

Launching the Virtual Room

Navigate to your schedule -> Select the telehealth block -> When prompted by the browser, you must bridge into the secure environment.

Command Controls: Inside the Virtual Visit

Unmute

Start Video

1. Activation:

Managing the encounter requires strict control over your AV feed. Ensure you are visible and audible by clicking Unmute and Start Video as soon as you enter.

2. Simultaneous Charting Pro-Tip:

Keep the patient's athenaOne chart open on a separate monitor or split-screen to document dynamically while maintaining eye contact on the video feed.

The Top-to-Bottom Intake Flow

AthenaOne's intake workflow is designed to support a natural clinical conversation, not dictate it.

The Waterfall: Follow the structured top-to-bottom intake workflow to ensure **no critical data** is missed.

Dynamic Customization: Hide or skip standard questions that are not relevant to the specific visit type or specialty. Don't click through empty fields—**clear the visual clutter**.

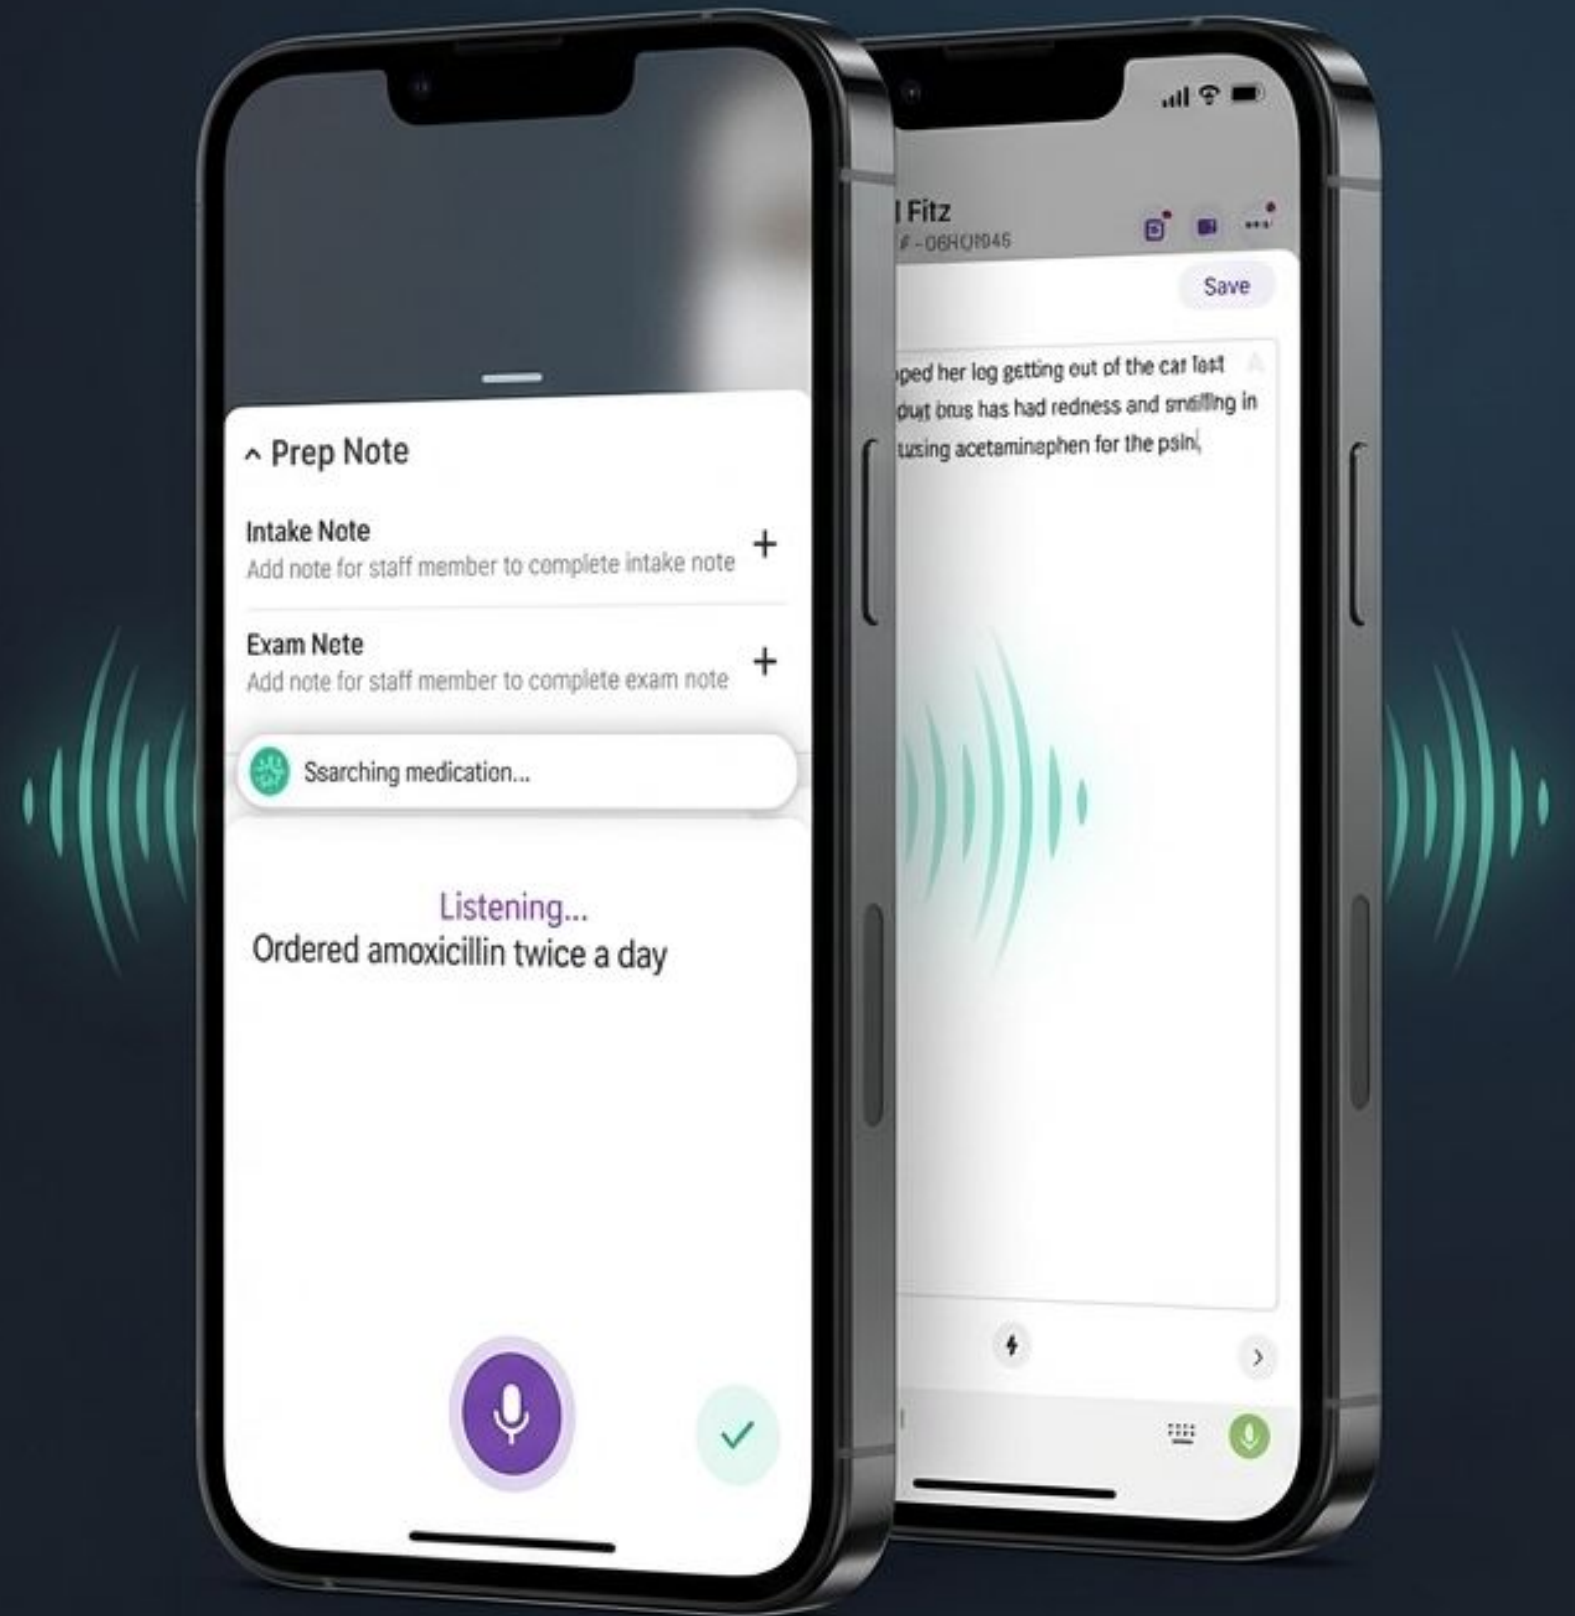

Supercharging Speed with Athena Voice

Mobile + Voice Assistant = drastically reduced total task completion time. Instead of clicking through deep menus, use natural language dictation.

 Navigation: "Hey athena, what is my schedule today?"

 Charting: "Hey athena, start my HPI."

 Orders: "Hey athena, order amoxicillin twice a day."

REMOTE PRO-TIP: The Dual-Monitor Sanctuary

The Problem

Constant context switching between the myPrivia portal, telehealth video, and charting tabs causes severe cognitive drain and missed details.

The Fix

Hard-code your screen geography. Never overlap your video feed with your active chart. **Muscle memory thrives on consistency.**

The Downstream Effect: Post-Visit Automation

Your precise clicks during prep and intake fuel a massive automated engine once the visit ends:

Patient Portal

Lab results automatically post to **myPrivia**.

Revenue Cycle

Clean charting triggers **seamless claims and prior authorizations**.

Continuity

Automated patient engagement and self-pay reminder cycles fire without manual intervention.

The Seamless Loop

Video

You are the bridge.

By mastering the search (**Find**), standardizing your prep (**Macros**), and confidently navigating the virtual room (**Start Video**), you transform a chaotic digital queue into a seamless, human-centric patient experience.

You protect the provider's time. You protect the patient's peace of mind.
