

Module 3

Omni-Channel Triage: Mastering the Digital Command Center

Virtual Assistant RN Protocol | Prima Medicine

The Reality of Remote Triage

You are the digital frontline for Prima Medicine. From physical isolation, you manage an immense, omni-channel influx of patient needs, portal messages, and clinical alerts.

The cognitive load is real. Screen fatigue is real.

This module is not just about learning software—it is about turning athenaOne into a shield that protects your time, organizes the chaos, and connects you directly to the clinical floor in Fairfax and South Riding.

The Omni-Channel Funnel

Every patient channel, one central command. Mastery of the Inbox is mastery of the clinic.

The Prima Medicine Priority Matrix

Patient Cohort	Inbound Channel & Need	Triage Action & SLA
Prima Concierge Care (Dr. Shafai)	Direct/Portal: High-touch requests, longer visits.	Immediate Routing. Same-day access expectation.
Standard Primary Care	myPrivia App: Chronic disease management, telehealth, lab results.	Standard Inbox Triage. Route to assigned provider queue.
Urgent / Off-Hours	Walk-in/Portal: Acute illness, injuries, flu.	Urgent Queue. Route to Fairfax hub or Prima Immediate Care.

Triage Step 1: The Identification Decision Tree

The Hover to Discover Protocol

The screenshot shows a 'Find a Patient' interface. At the top, there is a search bar with 'ALEXANDER, PAM' entered. Below the search bar, a table lists 31 results. The first two rows are highlighted in blue. A red arrow points from the 'CPI View' link in the side panel to the first highlighted row in the table. A mouse cursor is hovering over the first row of the table.

Find a Patient

Patient Name [Add filter](#) [Find](#)

Click [CPI View](#) to instantly verify demographics without losing your search queue.

Triage Step 2: Managing the Telehealth Queue

The Patient View

Yes, I'll be there

Begin Pre-Registration

Start device check

The Command Center View

The Triage Prep Checklist

1. Verify patient has completed the **Begin Pre-Registration** paperwork. ✓
2. Confirm patient has clicked **Start device check** (prevents tech delays during Dr. Rao's virtual rounds). ✓
3. Monitor the **virtual waiting room** for the arrival status.

Remote Pro-Tip: The Pre-Encounter Sweep

The Goal: Minimize clinical distractions before the virtual visit even begins.

The Action: Utilize the Pre-encounter prep feature in athenaOne.

1. Customize Intake

Add or hide standard intake questions based on the specific visit type (e.g., hiding irrelevant fields for a simple follow-up).

2. Add Templates

Pre-load screeners or planning orders into the chart.

3. Check Eligibility

Ensure check-in tasks are complete to prevent denied claims down the line.

Proactive sweeps allow the provider to focus entirely on the patient face-to-face, reducing documentation time post-visit.

Triage Step 3: Voice-Accelerated Execution

88%

Reduction in total task completion time.

3+ Hours

Saved per provider, per week.

When managing high-volume triage, the keyboard is a bottleneck. The **athenaOne Mobile Voice Assistant** allows you to navigate, document, and execute orders using **natural language**.

Anatomy of a Voice Command

Prescribing

 Hey athena, order amoxicillin twice a day.

Sign This Order

1. Review the parsed details:
Verify the structured SIG data (Dose, Route, Frequency)
generated by the voice command.

2. Ensure the Structured toggle is active.

3. To complete the prescription and authorize, tap **Sign This Order**.

Note: The system will automatically populate your
favorites list with prefilled dosing based on utilization.

Routing Population Health Holds

Every month, CCM/PCM claims require supervising provider review. When managing these documents in the Inbox:

- 1:** Select the radio button for **Submit** in the action area.
- 2:** Click into the Action note field and type **Reviewed** to sign off on the Care Plan Audit.
- 3:** Click **Save**.
- 4:** If a claim is held by a custom rule (e.g., Procedure 99490 requires coding review), review the summary and click **Override** to submit the claim to CMS.

☒ Submit

Action note

The Synthesis: The Zero-State Inbox

Omni-channel triage is not about working faster; it is about working with precision. By utilizing the Hover Protocol to stop tab-clutter, pre-encounter sweeps to stop clinical friction, and Voice Assistant to bypass the keyboard, you collapse the chaos into a single, manageable stream.

The **INBOX** is your command center. At zero-state, you are no longer reacting to the digital noise—you are actively orchestrating patient care for Prima Medicine.
