

Prima Medicine Training Series: Remote Care Coordination

Module 4: Mastering the
CCM & PCM Workflow
in athenaOne

The invisible glue holding patient care together

You manage a high volume of digital tasks every day.
From navigating endless tabs to processing notifications,
your screen is the frontline of patient care.

This module transforms athenaOne from a scattered checklist
into your organized, centralized command center.

The 4-Phase Care Coordination Cycle

Establish your Home Base to manage populations

The screenshot shows the athenaOne interface with the 'Patients' tab selected. A dropdown menu is open, showing 'Patients' and 'Care Programs Panel'. The 'Care Programs Panel' is highlighted. Below the dropdown, there are filters for 'Care Management Program' (set to CCM), 'Accrued Time By Month' (set to June 2024), and 'Care Team' (set to - Type or Select -). A 'Patient List' table is visible below the filters, with a 'Care Management Program' dropdown set to CCM. Three callout boxes provide instructions: Step 1: Click the Patients tab. Step 2: Select the Care Programs Panel from the dropdown menu. Step 3: In the filter area, set the Care Management Program to CCM.

Step 1: Click the **Patients** tab.

Step 2: Select the **Care Programs Panel** from the dropdown menu.

Step 3: In the filter area, set the **Care Management Program** to **CCM**.

To manage a high-volume population efficiently, avoid hunting through individual charts.
Your **Care Programs Panel** is your command center for population health.

Generate required consent documentation with precision

Step 1: Click the **gear icon** > **ADMIN** > **Clinicals**.

Step 2: Navigate to **Practice Links** and select **Add Forms**.

Step 3: Configure the required fields.

Navigate directly to the patient's active health blueprint

Once a patient is enrolled, this is where their ongoing care strategy lives. The Active Care Plan centralizes health risk assessments, goal setting, and behavioral modifications in one view.

Execute and document daily coordination tasks

The image shows a screenshot of a web application interface. On the left, there is a sidebar with a green square icon. The main content area is titled 'Care Team Tasks' and contains a list of tasks, each with a timestamp and a description. A green button labeled 'Complete' is positioned to the right of the tasks, with a green mouse cursor pointing at it. The tasks listed are:

Care Team Tasks	
03:26:38 PM	Dietary Consult Referral
03:17:51 PM	Dietary Consult Referral
03:10:53 PM	Dietary Regime
03:10:53 PM	Diabetes - Blood Sugar Log Review
03:10:53 PM	Diabetes - Dental Appointment Scheduling
03:10:53 PM	Diabetes - Ophthalmology Appointment Scheduling

Completing a task isn't just about checking a box; it creates the timestamp required for Medicare compliance. Scroll down to **Care Team Tasks** in the Care Plan, and always select **Complete** to log your coordination time.

Remote Pro-Tips for Workflow Acceleration

Preventing Bottlenecks:

Always check the Pin to Top box when sending Care Plan Summaries. This forces the document to the top of the provider's view, preventing signature delays.

Reducing Typing Fatigue:

Utilize the athenaOne Voice Assistant to save your hands. Use phrases like Hey athena, what is my schedule today? or Hey athena, start my HPI to retrieve data instantly.

Coordinate external care seamlessly via athenaClinicals

1

1: Within the patient chart, navigate to the **orders section**.

2

2: Select the **Create Order Group** button.

3

3: Designate the correct **Ordering Provider** to ensure the referral routes appropriately.

Placing referral orders correctly ensures interoperability between Prima Medicine, labs, and external specialists.

Audit monthly time thresholds to secure compliance

Return to your **Care Programs Panel** at the end of the month. Use these specific filters to instantly identify which enrolled patients have met their required care coordination minutes and are ready for provider sign-off.

Execute the Provider Sign-Off handoff

The diagram illustrates a form for executing a Provider Sign-Off handoff. It consists of a main container with three radio buttons on the left, an 'Action note' text field in the center, and a 'Save' button at the bottom right. Three green callout boxes with numbers 1, 2, and 3 point to the 'Submit' radio button, the 'Action note' field, and the 'Save' button, respectively.

1. Select the radio button for **Submit**.

2. Click into the **Action note** field and type 'Reviewed'.

3. Click the **Save** button.

This sequence routes the Care Plan Audit to the Supervising Provider's Inbox for final authorization before billing.

Finalize the cycle by creating the billing request

▼ Review: PopHealth CCM claim review [Custom Rule #2]...

[Default] Procedure 99490 requires coding review.

Description: CCM claims that are created with the integrated Clinicals/PopHealth CCM workflow must be held for supervising provider review.

Instructions: Review the CCM claim, cross-referencing with the associated care plan as needed.

Override [Override all custom rules from same category](#)

If a custom coding review rule pauses the claim, simply cross-reference the care plan documentation and click **Override** to submit the final claim to CMS.

The Remote RN Code & Time Matrix

	Time	Complexity
CCM (99490)	First 20 mins	Non-complex (Clinical staff)
CCCM (99487)	60+ mins	Complex (Clinical staff)
PCM (99426)	30 mins	Single high-risk disease (Clinical staff directed by QHP)

Keep this matrix visible on your workstation to instantly verify threshold requirements before generating a billing request.

Connecting digital clicks to tangible patient outcomes

Every completed task and minute logged in **athenaOne** represents a **safety net for a vulnerable patient**. Your diligent care coordination from afar **prevents hospital readmissions, closes critical care gaps, and ensures no patient falls through the cracks.**

Command Center Mastered.

You are now equipped to navigate the athenaOne CCM/PCM workflow with precision and confidence.
